### **McClarin Plastics Hosts Luncheon for CCT – Certified Composites Technicians**

HANOVER, PA – November 16, 2006 – When you apply to become a Certified Composites Technician (CCT), you have taken the first step towards achieving excellence in the composites industry, advancing your career and pursuing comprehensive composites knowledge. The Composites Fabricators Association created the CCT program in response to industry's need for uniform training in technical skills. Although manufacturing techniques may vary slightly from company to company, the materials and the molding process dictate the principles of composite fabrication. A fundamental understanding of the process, materials and methods is necessary to successfully produce quality composite products. The goal of the CCT program is to enhance the overall professionalism of individuals involved in composites production, and demonstrate their knowledge of composites.

The CCT program is designed to elevate standards in the industry by enhancing individual performance and recognizing those who demonstrate critical knowledge of the composites industry. The CCT designation is a noted symbol of education among employers, employees, and industry professionals. As the industry advances, being a CCT will become increasingly important.

If you have worked in the composites industry for at least one year and are committed to developing your career, attaining the CCT designation will allow others to recognize you as a certified composites industry professional.

The Certified Composites Technician program is a multi-level certification curriculum, which ranges from practical fabrication shop technology to in-depth technical knowledge of composites. Additionally, CCT includes several specialty process areas.

Recently, McClarin Plastics hosted a luncheon for twelve employees who just completed the CCT course, and for the seven employees that received their recertification. Certificates were presented by McClarin's Tim Carbaugh, CCT Instructor (CCT-I).

This is just another step McClarin has taken to provide their employees with continued education, and ultimately providing their customers with continuous quality.

## McClarin Plastics/CCT Luncheon/Page 2

Congratulations on accomplishing the CCT Degree to:

Paul Weikert – Recertification  
Jake Miller – Recertification  
Brad Crone – Recertification  
Don Pritt – Recertification  
Corbin Kauffman – Recertification  
Phil Macy – Recertification

Andy Beckner – New  
Matt Gervasio – New  
Jason Keplinger – New  
Anthony Bream – New  
Pam Crouse – New  
Larry Mummert – New  
Charles Bare – New  
Sean Myers – New  
Jason Stambaugh – New  
Frank Royce – New  
Brian Shirk – New  
Scott Crandall - New
